

## Rain water Harvesting pit

Due to decreasing groundwater levels and irregular rainfall patterns, there is a need to adopt sustainable water management practices. Department of Botany of Govt. Degree college (W), Marripalem initiated the construction of a rainwater harvesting pit within the college campus to address water scarcity and to educate students on eco-friendly solutions. It not only conserves water but also serves as a practical model for students to understand environmental sustainability and resource management and also enhances environmental responsibility among students and provides hands on learning experience, contributes the eco-friendly campus development.
