

MGNREGS - Nursery Development

The government Degree college successfully implemented a Nursery Development programme under the Mahatma Gandhi National Rural Employment Guarantee scheme (MGNREGS) in collaboration with the forest Department. This initiative aimed at promoting environmental sustainability, biodiversity conservation, and practical learning among students.

As a part of program a well organized nursery was established within the college premises. Various species of forest plants (Eucalyptus, casuarina, Schizigium, Terminalia, Tectona) were raised.

The Botany students actively participated in all stages of nursery development, including seed collection, soil preparation, sowing, watering, transplantation and maintenance of seedlings. This hands-on involvement helped students gain practical knowledge in plant propagation techniques and nursery management.
